Consent for Dental Treatment

Family Health is committed to improving dental health in our community and establishing a dental home for every child.

During your first visit, your child will get to know Dr. Dajani and her staff. Also at this time, Dr. Dajani will explain to you and your child all necessary dental procedures that may be required. Our goal is to give your child a friendly and happy experience.

Please review the following procedures that are usually completed:

- Comprehensive exam (the evaluation of the growth and development of your child's teeth)
- Review of diet and oral hygiene instructions
- Radiographs as recommended by the American Academy of Pediatric Dentistry (www.aapd.org)
- Cleaning
- Evaluation for fluoride treatment as recommended by the American Academy of Pediatric Dentistry.
- Establish a plan of care according to your child's future dental needs.
- Dr. Dajani will evaluate your child in order to design an individual health plan to assist your child's comfort during his/her dental visit. This may include oral sedation (sleepy juice), laughing gas or in some cases, medication may be prescribed prior to the visit. Younger children, children with compromised medical conditions or excessive decay may require Dr. Dajani to see your child at Dayton Children's Hospital to complete the work under general anesthesia.

I give Family Health the permission to complete the following procedures.

- Comprehensive Exam
- Cleaning
- Radiographs
- Fluoride Application
